# Ride Assignment

Riders are assigned to children based on location and schedule, with shared TukTuk rides grouped along the same route.

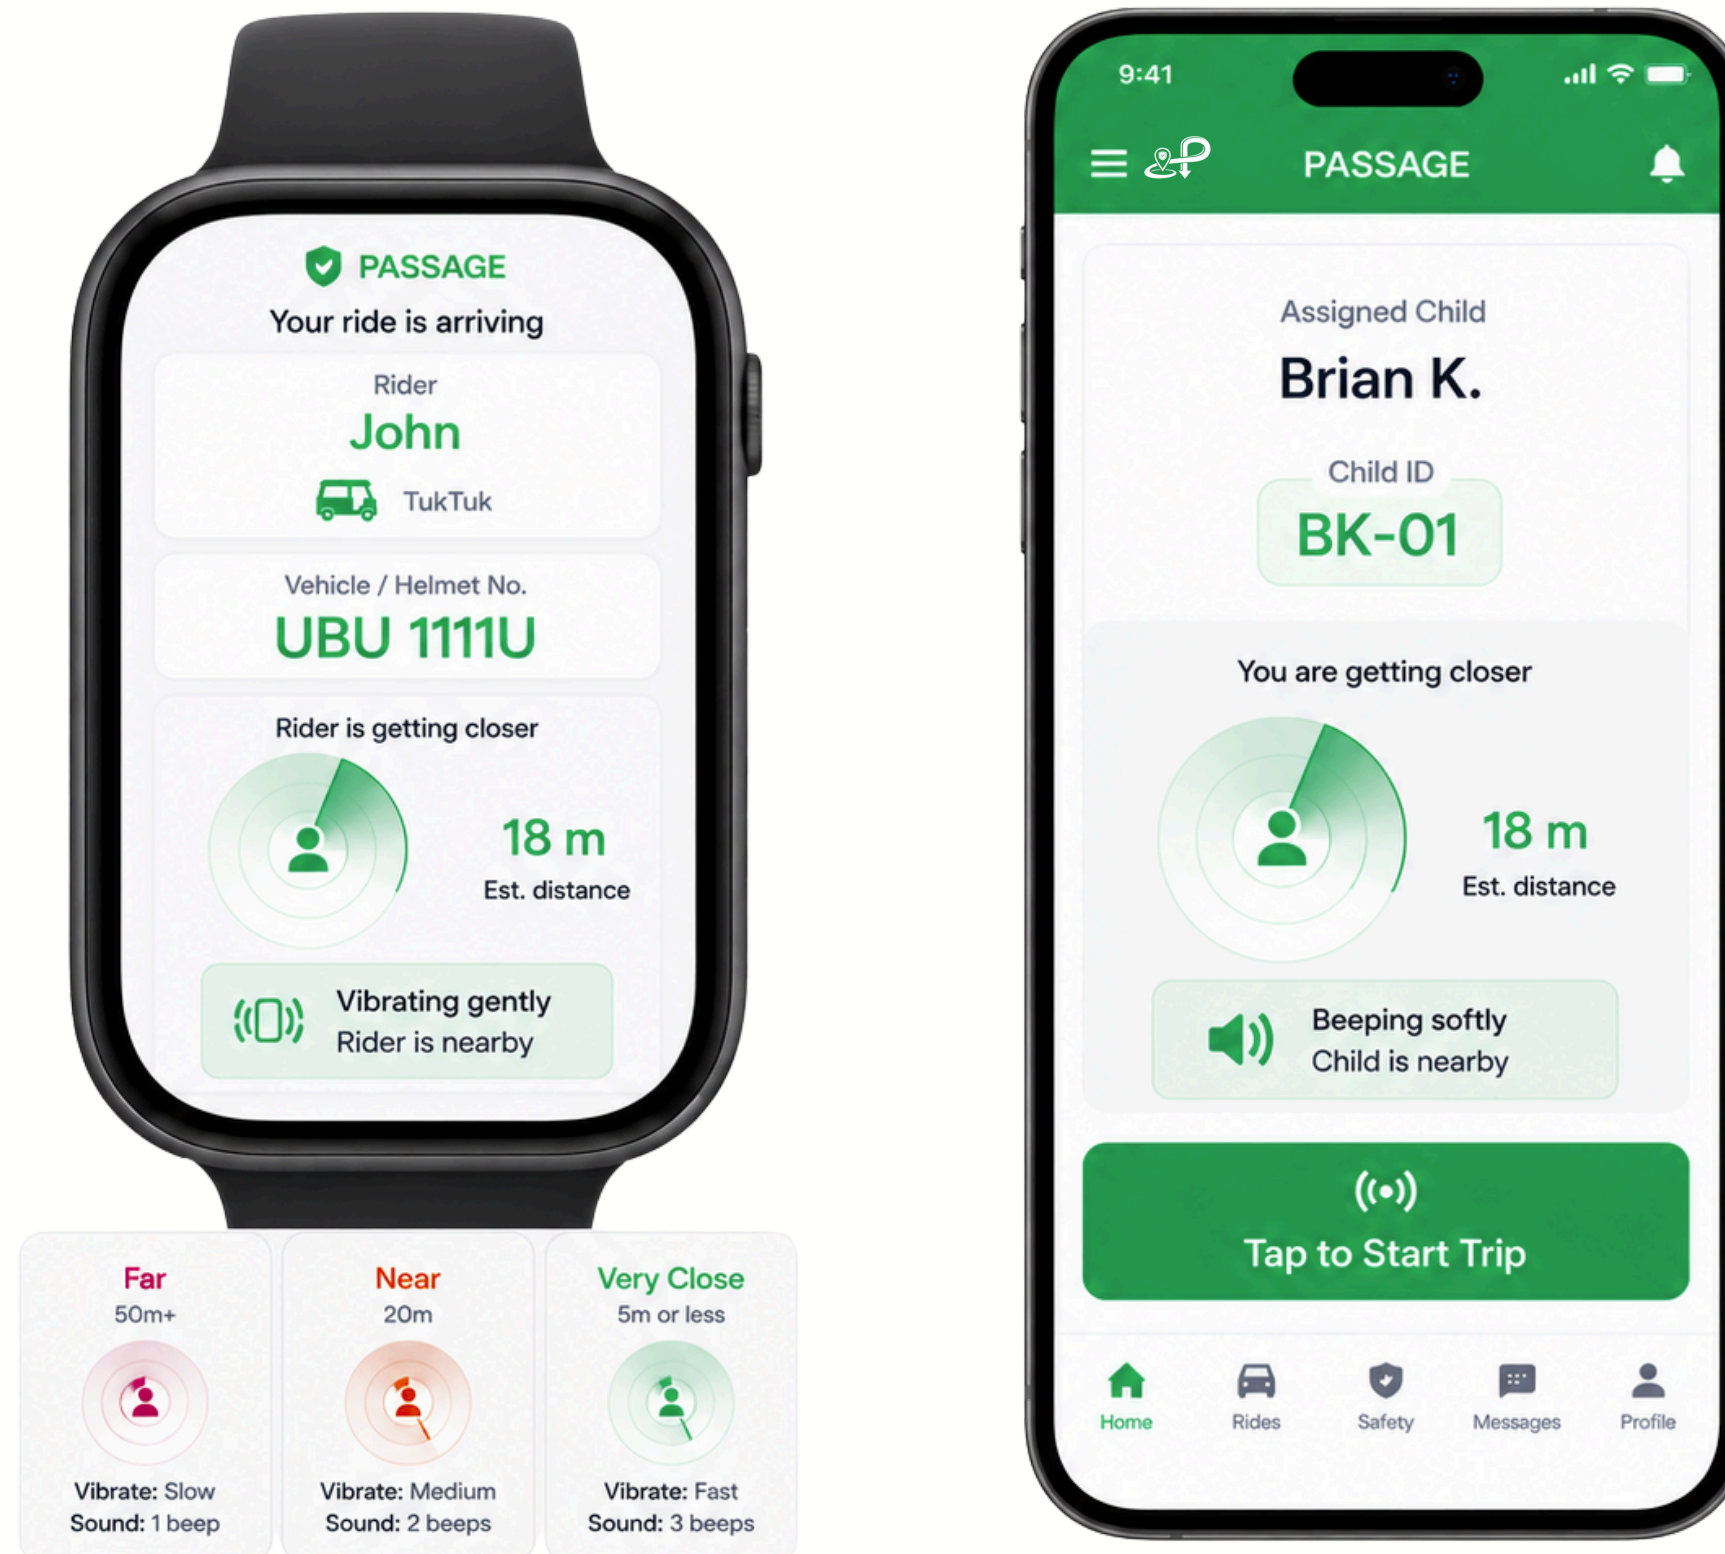

# Parent View

Parents can see  
who is picking up  
their child and  
when

# Pick-up Coordination

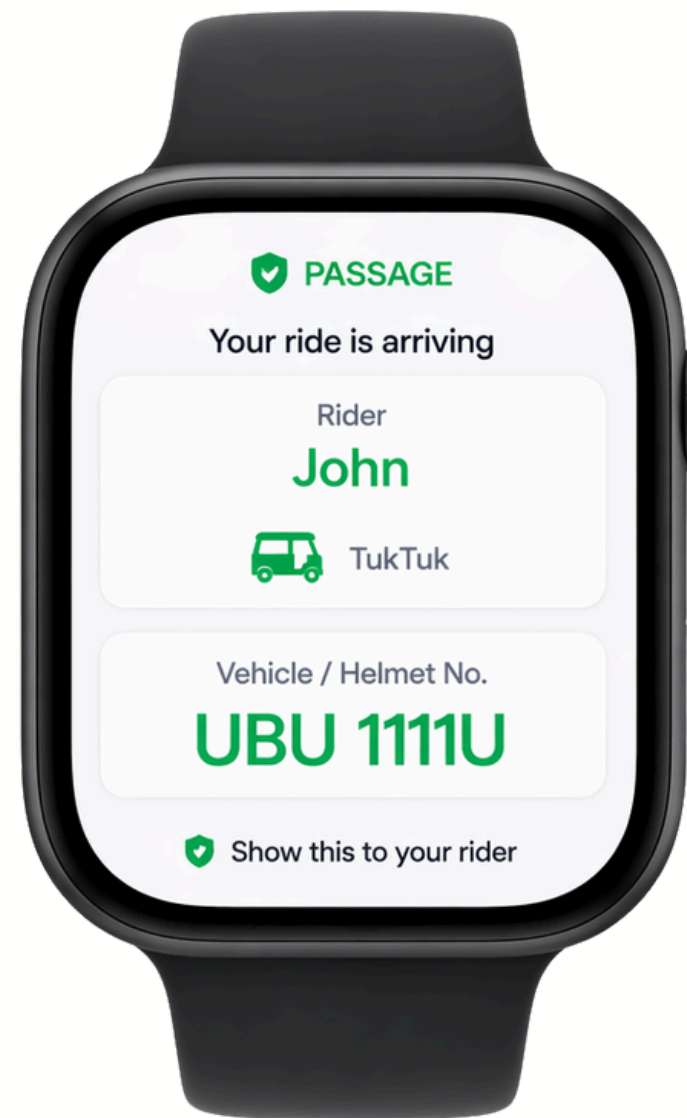

As the rider and child get closer during pickup, the system provides real-time visual, vibration, and sound feedback to help them locate each other.

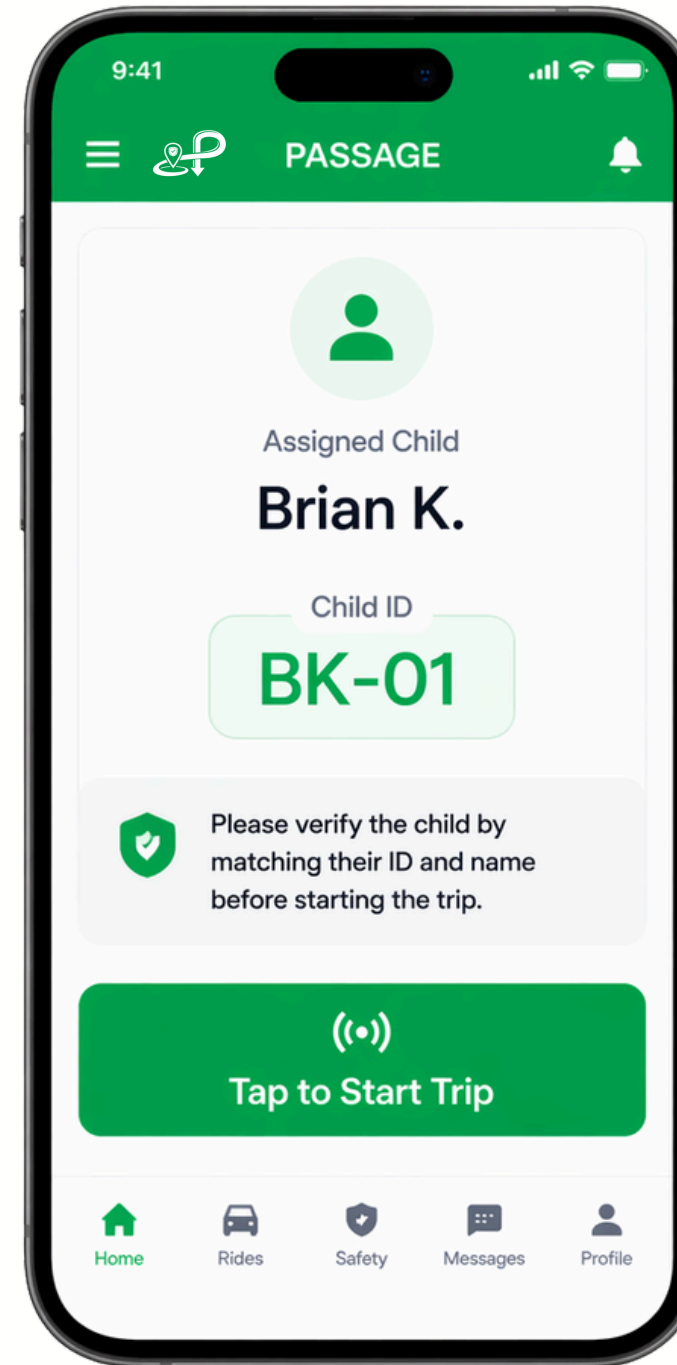

# Child-Rider Matching

Child's Wearable Screen

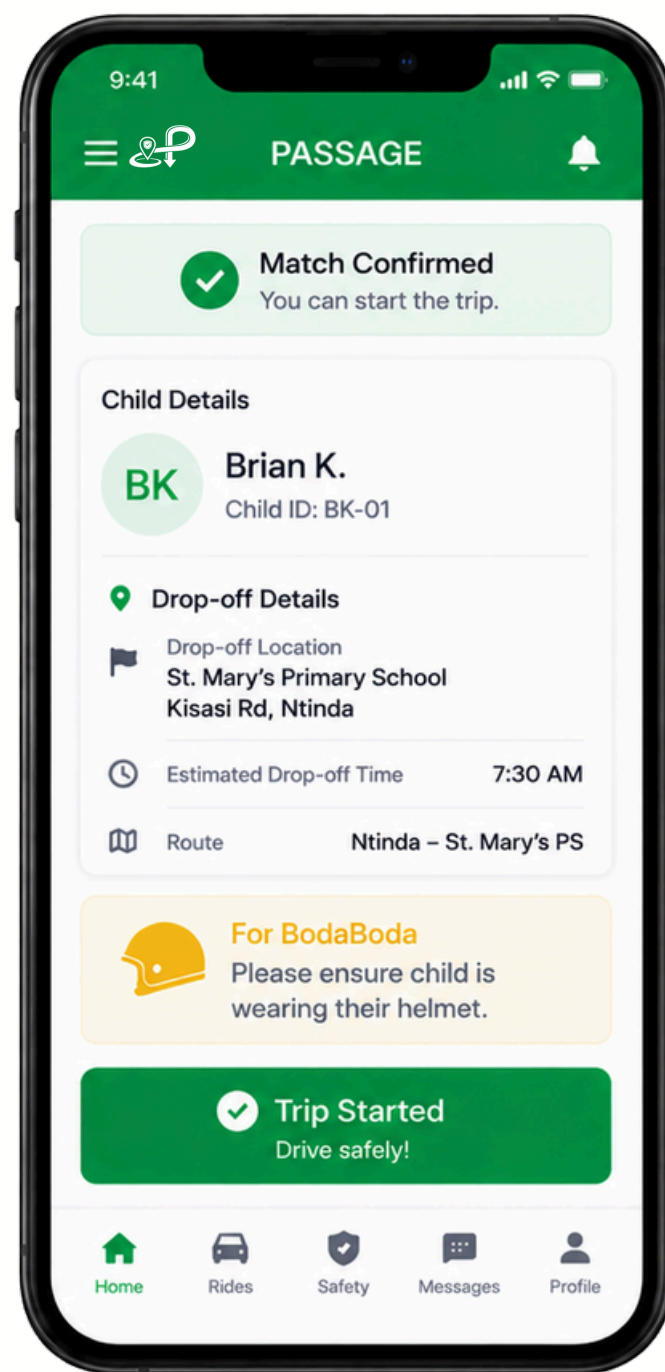

Rider's App Screen

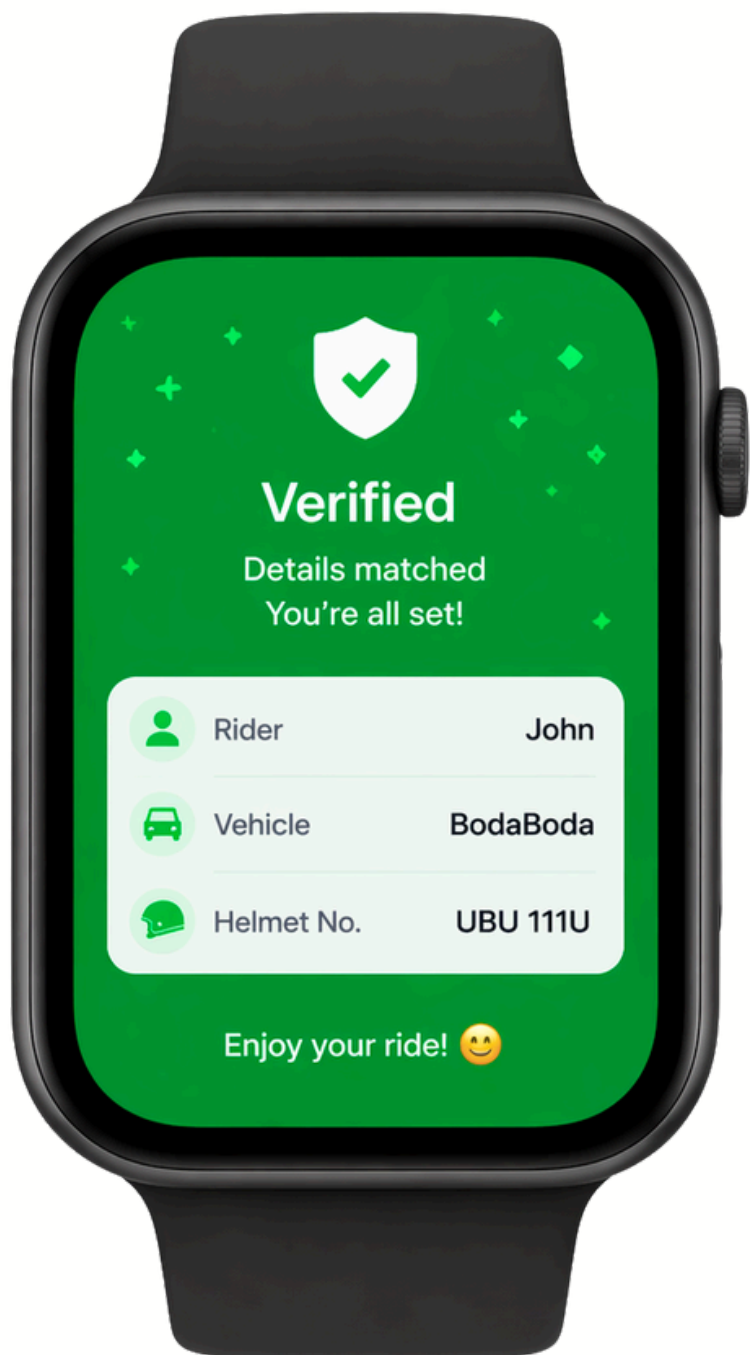

Once the rider and child locate each other, they verify the correct match using ID and vehicle details before the trip begins.

# Trip verification

Rider's App Screen

Child's Wearable Screen

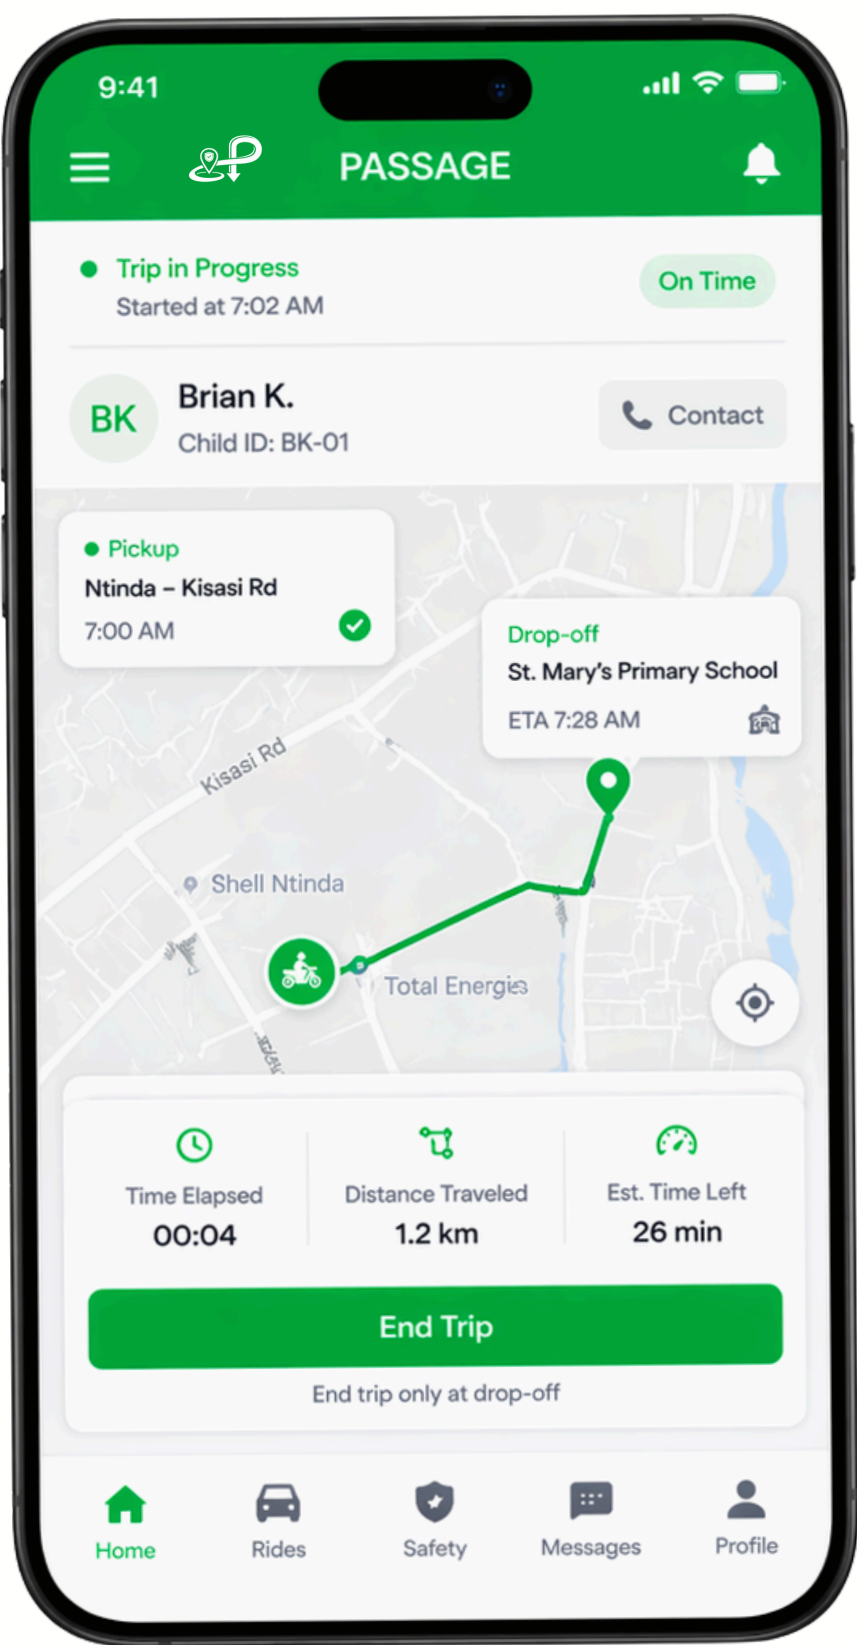

The rider verifies the child before the trip can begin. Trips only start after a successful match

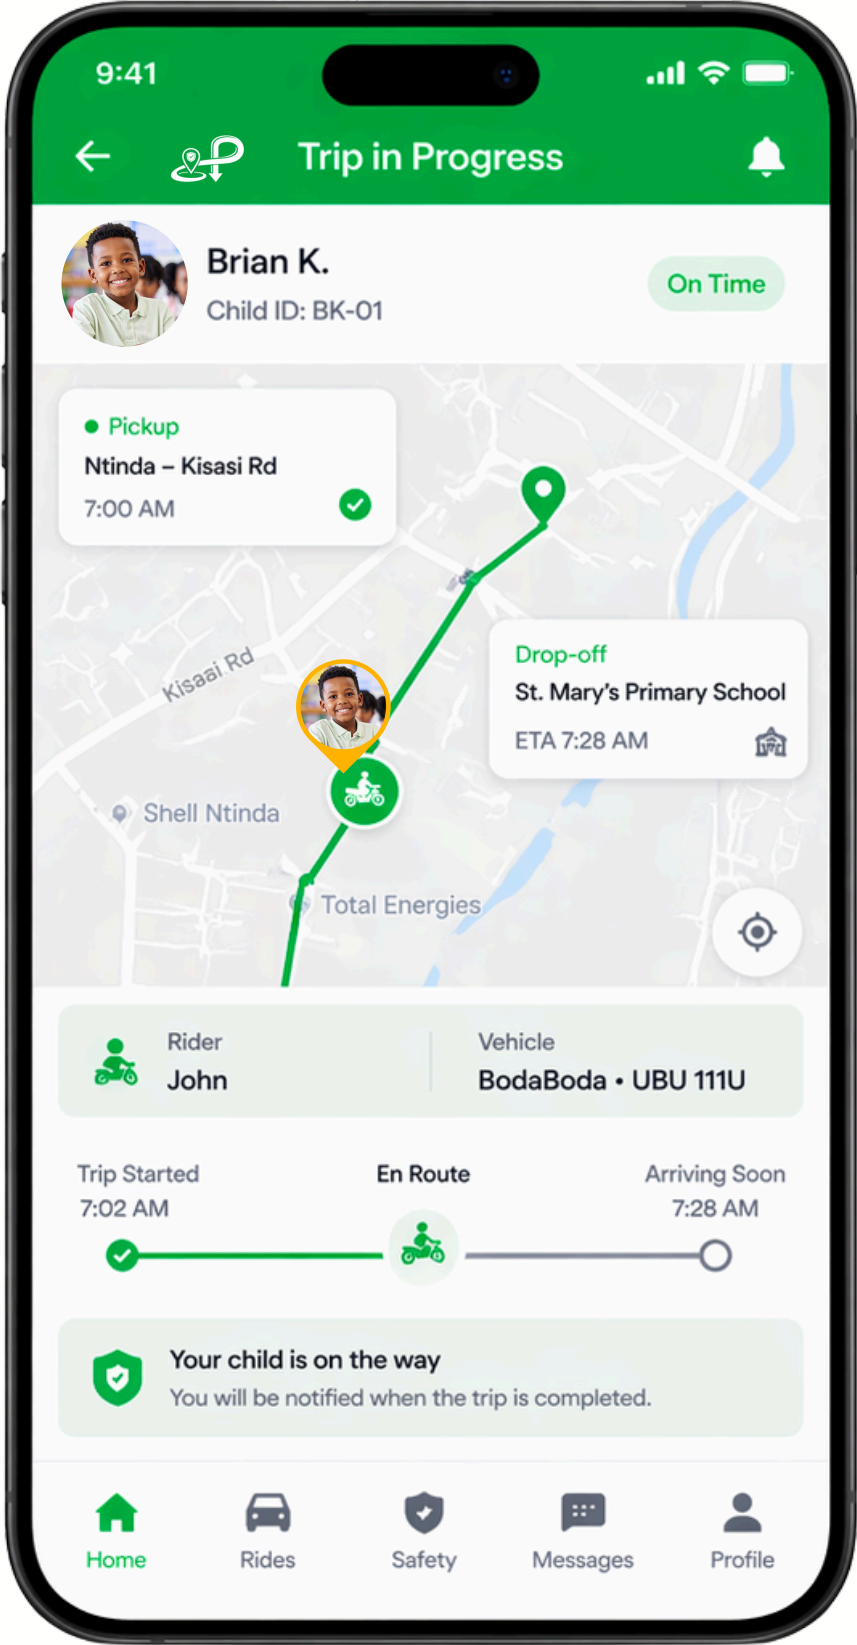

# Trip Progress

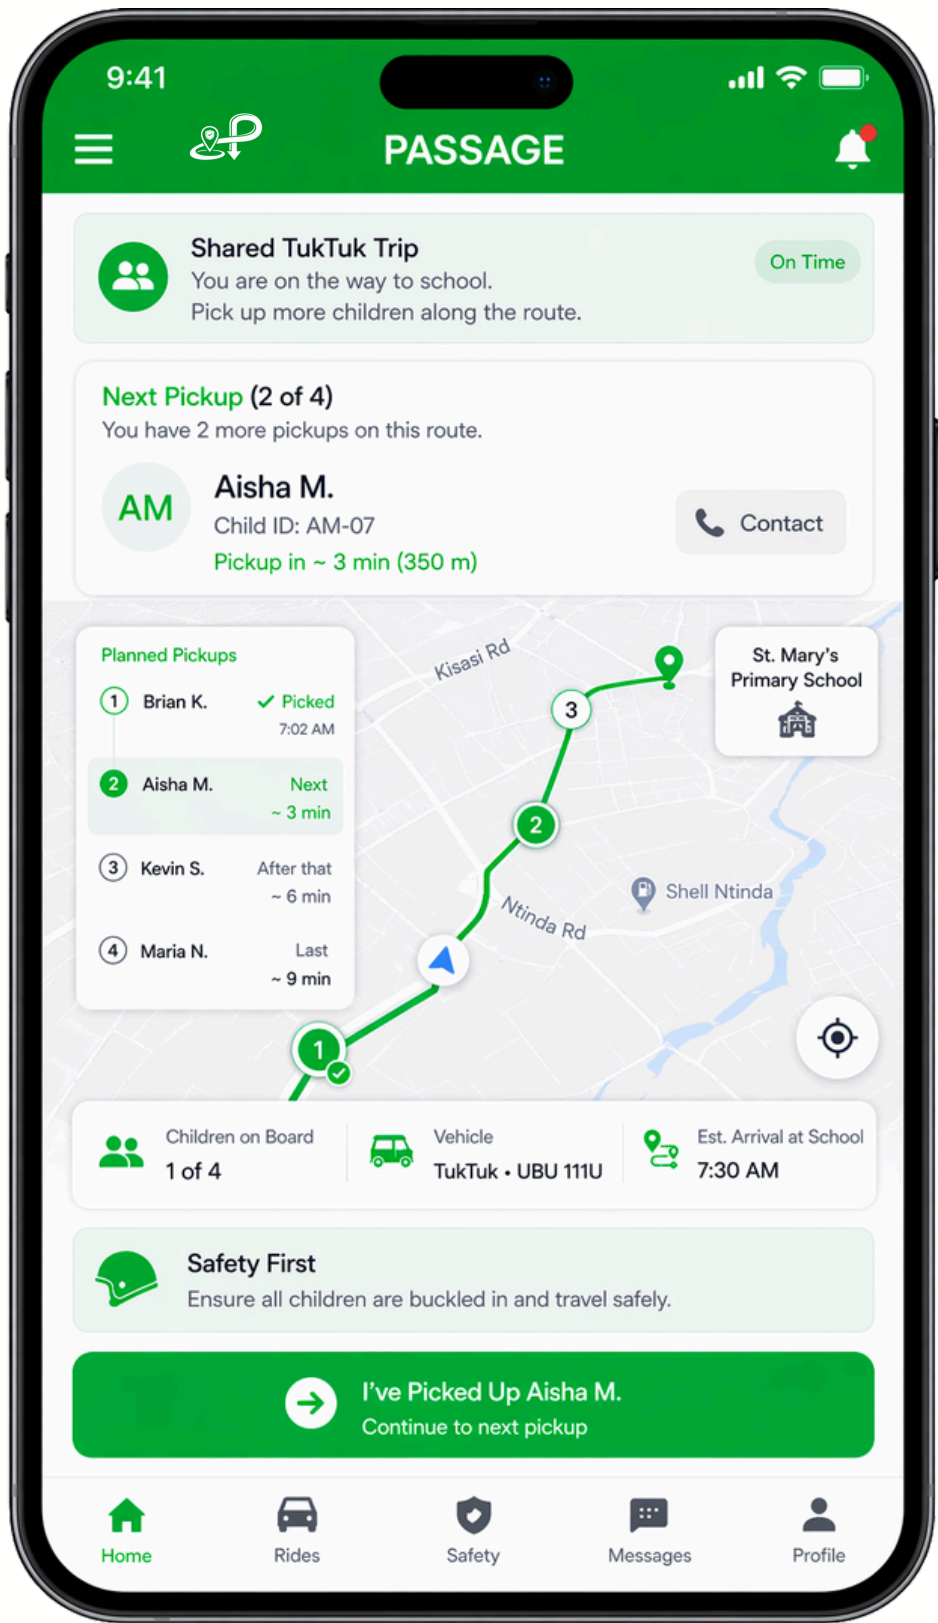

Rider's App Screen

Parents App Screen

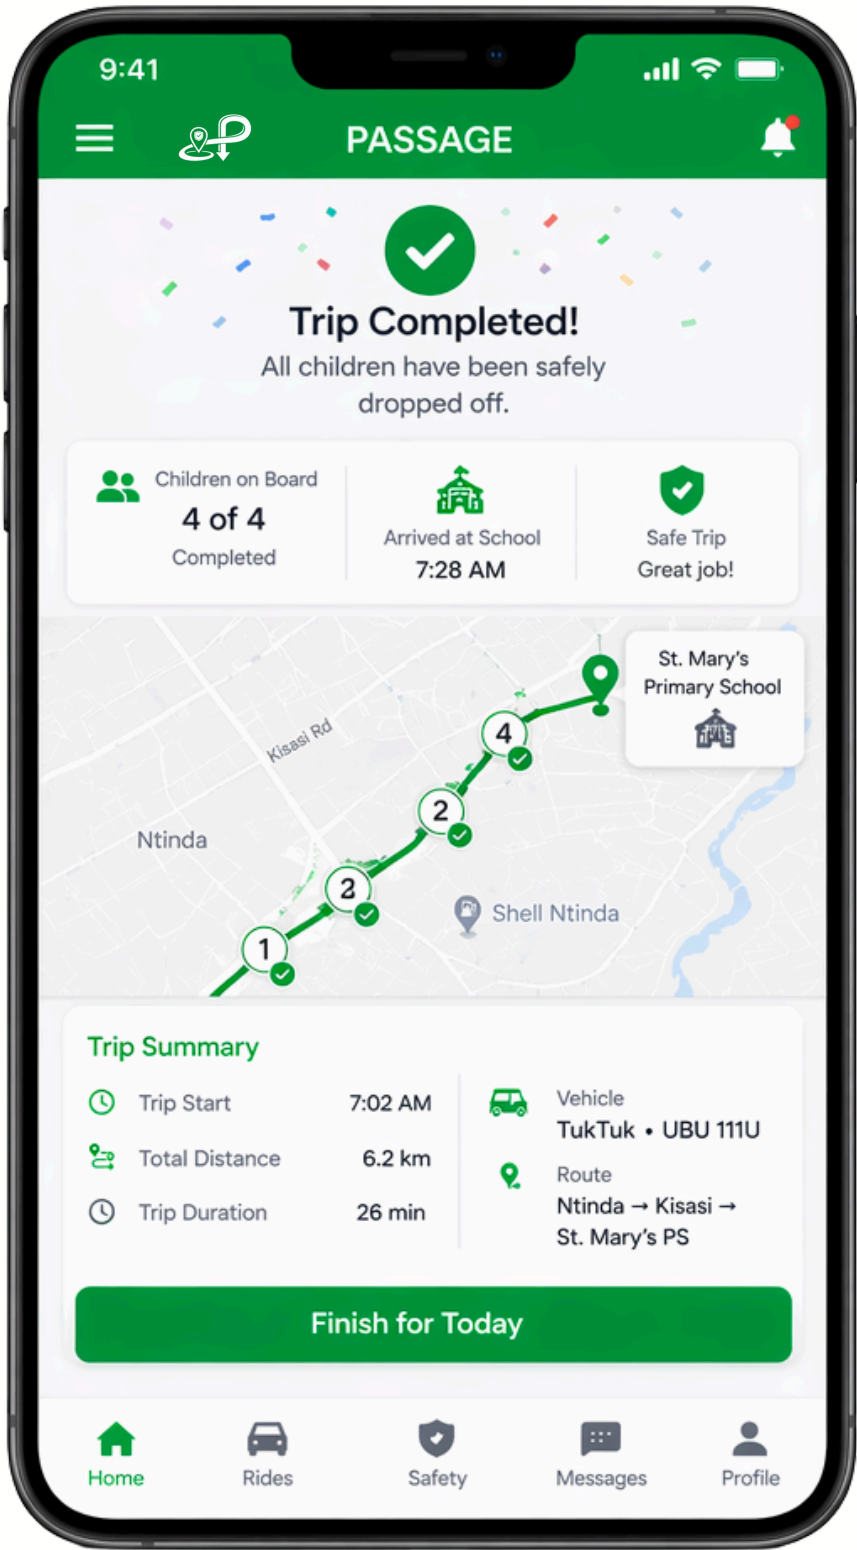

Shared TukTuk rider App Screen

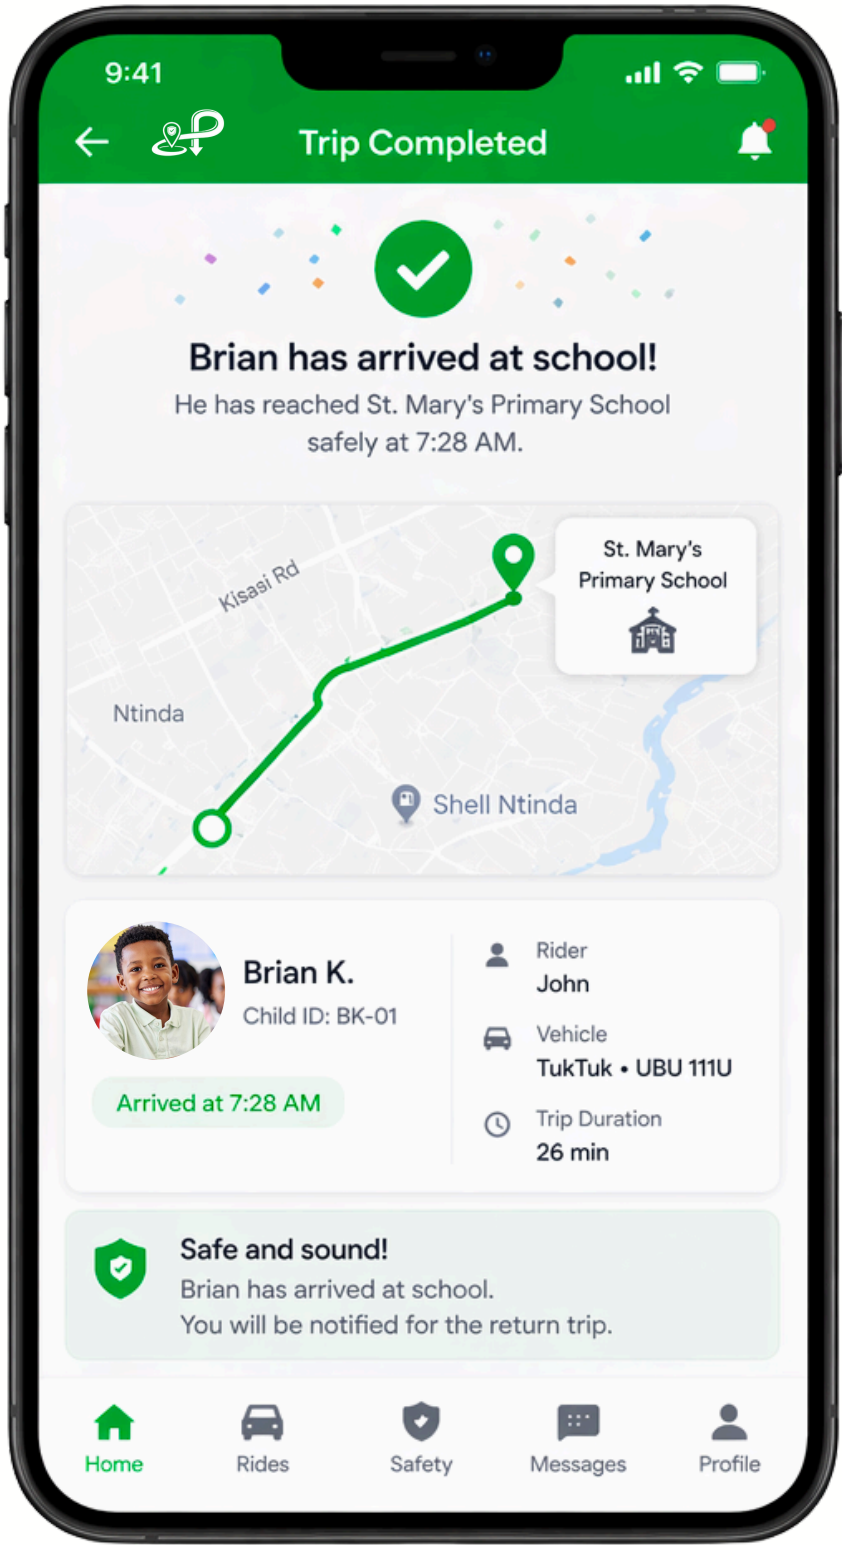

Parents can track and monitor the trip in real time

# Trip Completed

Rider's App Screen

Parents App Screen

Parents are notified once the child arrives safely at school

# Hardware Design-External

Protective flip  
cover to prevent  
accidental input  
and protect the  
device screen
